

Visionnaire created a Voice Artificial Intelligence Agent to answer questions about the company

Visionnaire is committed to delivering unique user experiences, focusing on technological innovation, intuitive design, and efficiency.

To enhance interactions with leads, clients, and interested users, the company leveraged Artificial Intelligence (AI) to develop advanced virtual assistants that strengthen customer engagement.

Visionnaire aimed to go beyond traditional chatbots, creating an AI Agent that ensures fast, natural, and precise interactions.

As AI evolved, the company also launched a Voice AI Assistant, making interactions even more fluid and efficient.

The Voice AI Agent was developed in under a month, integrating ElevenLabs APIs to ensure a seamless, high-performance AI experience.

This 24/7 virtual assistant provides quick and accurate responses about Visionnaire's services, personalized customer interactions, technical support and lead qualification.

Key benefits for businesses reduced operational costs through automation, continuous 24/7 availability, customizable AI solutions for different industries, and enhanced engagement and customer satisfaction. With deep expertise in AI technologies, Visionnaire works with APIs like OpenAI, Midjourney, Claude, DeepSeek, DALL-E, and Gemini, staying updated on innovations from Anthropic, Amazon, Google, and OpenAI.

Businesses can interact with the Voice AI Agent via the Visionnaire website, where a widget provides instant assistance. By integrating AI, companies can enhance efficiency, cut costs, and optimize customer engagement.
