Success Case

KlasseTech – Hunting Manager System

Problem

Klasse! Tech had a major bottleneck in the production of Mapping reports of Professionals or Market, which is delivered to the customer for decision making regarding the recruitment process.

This happened because all the data were collected and manually analyzed, which took a lot of time and slowed down the process.

Solution

The solution was developing an online intelligent system, able to cross different information from Klasse's database.

With the solution, Klasse's recruiters now have a system that allows them to make searches with specific filters, besides observing and evaluating applicants' profiles.

Results

From now on, Klasse will significantly reduce the time needed to feed its database with information about companies and professionals, as well as the time needed to complete deliveries to its clients.

Klasse's recruiters can now generate reports based on specific information of applicants. Clients can access the database.
